

MAXITIA PROJECT INC.

May 24, 2025

On May 24th, 2025, Maxitia Project Inc. and the Hope and Esperanza Community Health Center participated the Legacy in Blue 2025 — A Day of Hope, Healing, and Action, Community Awareness and Health Screening Event. The event was held at the Military Park in Newark, New Jersey from 10:00 AM – 4:00 PM. The event was organized by the Riddle Reach Foundation.

RIDDLE REACH FOUNDATION 

There were Free Colon Cancer Screenings, Health Screening provided by the Hope and Esperanza Community Health Center and Maxitia Project Inc. in addition to Educational Workshops, Grief Support & much more!!

Legacy in Blue is more than an event, more than an initiative — it is a promise kept, a story continued, and a movement that has transformed personal loss into community action. Inspired by the life and courage of Dishreen Riddle-Simmons, Legacy in Blue was created to save lives, to educate, and to break the silence surrounding one of the most preventable yet deadly cancers: colon cancer.

Dishreen's story is one of strength and love. It is

a story of a woman who, in the face of colon cancer, chose not only to fight for herself but to dream of a future where fewer families would face the devastating diagnosis she carried. Her journey ignited a movement — one rooted in her belief that awareness, access, and community could prevent what took so much from her and her loved ones.

This is the heart of Legacy in Blue.

This year's Legacy in Blue event promises to be a powerful day of learning, connection, and collective action and Maxitia Project Inc. and the Hope and Esperanza Community Health Center are proud to be part of this worthwhile initiative.

The 2025 edition featured a two-part gathering, welcoming both the general public and dedicated supporters to honor the mission and expand its impact.

Bringing Communities Together Through Education

MAXITIA PROJECT INC.

The venue was chosen because this is where the community gathers — to learn, to connect, so it made a perfect place to help them take tangible steps toward protecting themselves and their loved ones. Participants left with both knowledge and access to services that can change — and save — lives.

At the Riddle Reach Foundation, they believe that meaningful progress is built on shared values, collaborative action, and a commitment to addressing the real challenges people face. Their work is not about sweeping, unattainable visions—it is about identifying where we can make a difference and focusing our efforts to create small yet significant impacts that ripple outward. They are a family foundation rooted in the belief that every person deserves the chance to thrive, but we recognize that success doesn't look the same for everyone.

Legacy in Blue is more than just an event; it is a transformative movement led by the Riddle Reach Foundation; inspired by Dishreen Riddle-Simmons journey with colon cancer.

Dishreen brother, Al-Jabbar Riddle, Esq., founder of Riddle Compliance Legal Services, is the founder and President of Riddle Reach Foundation. Dishreen Riddle-Simmons' journey with colon cancer inspired this movement. Her courage and

Al-Jabbar Riddle, Esq.

determination to create a better future for others shaped Legacy in Blue's mission. Her story is a reminder of the power of resilience and the importance of turning loss into action.

Legacy in Blue was created to address the urgent need for colon cancer awareness and prevention. As one of the most preventable cancers when detected early, colon cancer remains the second leading cause of cancer-related deaths in the United States. This movement strives to change that narrative by: ✨ Educating communities about the importance of early detection. ✨ Providing free resources and screenings. ✨ Building a network of support for individuals and families impacted by the disease.

Maxitia Project Inc. and the Hope and Esperanza Community Health Center plan to continue to collaborate with the Riddle Reach Foundation. Sharing resources and expertise. The goal is to provide meaningful programs to all communities and address the preventable health issues faced by our communities.

Si tiene 45 años o más con riesgo promedio de cáncer de colon, es hora de hacerse una prueba de detección.¹

El cáncer de colon puede afectar a cualquier persona, **de todas las razas y géneros.**² pero si se detecta en una etapa temprana, es tratable en 9 de cada 10 personas.³

Pregunte a su proveedor si la prueba Cologuard[®] es adecuada para usted.
